Improve your busines, Upgrade your software.

Salvagnini guarantees the perfect integration and continuity between machine and office proprietary software. The Salvagnini software packages and their upgrades always include the most recent releases and new functions for an easier and more efficient use of the systems and a faster return of investment.

CAM.SL4

 CAD/CAM software for the automatic generation of programs for the Salvagnini punching-laser cutting systems.

WHERE?

• On all the Salvagnini SL4 programming stations.

WHY?

- It allows new parts to be programmed "live" by taking advantage of the punching and laser cutting technologies combination.
- It guarantees flexibility in production changeovers and optimizes machining sequences.
- It reduces time for new products prototyping.

NEST.SL4

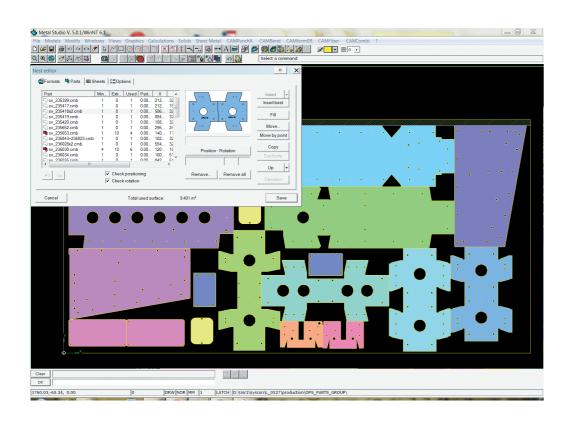

• Software for nesting programs for the Salvagnini punching-laser cutting systems.

• On all the Salvagnini SL4 programming stations.

WHY?

- It allows nesting operations to be manually and automatically managed.
- It guarantees the automatic and optimized composition of blanks starting from a list of parts to be produced.
- It reduces scrap percentage and production time.

SIMUL.SL4

• Software for the preventive check of the machining sequences of programs for the Salvagnini punching-laser cutting systems.

WHERE?

• On all the Salvagnini SL4 programming stations.

WHY?

- It allows the 2D/3D simulation of the real movements of the system.
- It guarantees an accurate part check by means of dimensional analyses.
- It reduces the possibility of production errors.
